Lists that continue

A numbered list can start anywhere:

4. The fourth step comes first here.
5. The fifth step follows it.
6. The sixth step ends the list.

An item may hold more than one paragraph:

- The first paragraph of the item is set next to the bullet.

  The second paragraph of the same item lines up with the first one and is separated from it by the list's paragraph space.

- A short item follows.

The text after the list starts a new paragraph.
