Numbered sections

1 Introduction

Three or more sections at the top level are numbered, as LaTeX numbers \section and \subsection.

2 Method

The method has parts of its own.

2.1 Measuring

Each paragraph is measured with the fonts it will be set in.

2.2 Breaking

Then it is broken into lines by minimising the total demerits.

3 Results

The results are compared line by line.

4 Discussion

Differences come from the fonts, the patterns and the page builder.
